Robert,

The breakdown on the final drive is as follows:

1 – Rebuilt Final Drive - exchange - \$12,000 - *6 mo warranty*
1 – Labor to remove and install final drive - \$4,000

Total \$16,000

I can also get a good used final drive for about \$8,000. The final drive I am quoting needs to be rebuilt so it will take a few days after we receive the order.

The benefit of going with a ready to install unit is that as soon as we have the parts, you can send in your machine and you can have your machine back in much less time. Down time on a dozer is very costly. We could price out rebuilding the parts you have if you would like to have it quoted that way as well. We could likely do it for less, but on your D8N, we would need probably 5 weeks and on your D85, we would need 2-3 weeks. With the option that I am suggesting that time is cut down to far less. There are not very many D85 final drives around, so if we want to go with that option, it may be wise to order it quickly so that we have one available. Please call with any questions.

Thanks,

Sam Oman
